REC'D 23 OCT 2003

WIPO PCT

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

I also certify that the attached copy of the request for grant of a Patent (Form 1/77) bears an amendment, effected by this office, following a request by the applicant and agreed to by the Comptroller-General.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.

Notes

- a) If you need help to fill in this form or you have any questions, please contact the Patent Office on 08459 500505.
- b) Write your answers in capital letters using black ink or you may type them.
- c) If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- d) If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- e) Once you have filled in the form you must remember to sign and date it.
- f) For details of the fee and ways to pay please contact the Patent Office.

PANEL BOARD PATENT APPLICATION

This invention relates to a composite lightweight panel board for use in the construction industry.

The board is made up from a combination of PUR foam, cement and water, bound on one or more face with high Zirconia alkali resistant glass fibre, known as G.R.C (Glass Reinforced Cement). This fibre can be applied as a chopped strand sprayed in a matrix of cement and sand or alternatively as a ready-made mesh.

The intention is for the board to be used as a permanent formwork for use in constructing walls, floors and roofs for buildings and other structures as an alternative to more conventional building techniques employing timber, masonry or steelwork materials.

With respect to the wall construction the intention is to form a 2 void building element using 3 sections of the board tied together as illustrated in the accompanying sketch No.100. The outer void formed would be filled with a self compacting concrete, either mass or reinforced depending on the application, to provide the structural component for the resulting structure. The inner void would be filled with a lightweight air entrained concrete, that would also contain PUR foam, which would provide the thermal insulation required to achieve the necessary U-values.

An important part of the process to produce the board is to pre-mix the PUR foam with water using a high shear mixer, and allow the resultant compound to rest undisturbed for a period of time. This rest period allows the foam/water mix to expand to its maximum potential before continuing, and hence eliminates the risk of further expansion on addition of the remaining water and cement needed as part of the next stage of the board's production.
